

U.S. Government Printing Office

Washington, DC

Many of our nation's most important information products, such as the *Congressional Record* and *Federal Register*, are produced at the GPO's main plant in Washington, D.C. Located just five blocks from the Capitol, this one hundred year old 1.5 million square-foot brick complex is the largest information processing, printing, and distribution facility in the world.

The Problem:

The problem at the GPO was a leak in a rain leader that was located in a structural column that ran 140 feet from the roof to the lower levels of the building. The last time the GPO experienced a leak in a rain leader, the fix involved four weeks of labor, a jackhammer and final restoration of the finishes.

The Solution:

This time, using modern technology, ACE DuraFlo franchisee, Chesapeake Pipe Restoration first ran an investigative camera down the rain leader and pinpointed the exact location of the leak. The two-man ACE DuraFlo team then inserted the ACE DuraFlo eLiner® and completed the repair. The job was completed in one day with no jackhammer or restoration work. Next day a water test was completed by the GPO's master plumber ... job completed with flying colors!!!
