**It is the difference that sets you apart from your competition.**

**Why repipe when you can ePIPE.**

**REMEMBER:**

**There is only one**

## ACE DuraFlo, ePIPE Joins U.S. Green Building Council

ACE DuraFlo Systems has become a member of the U.S. Green Building Council (USGBC). As you may be aware, Earth Day, April 22, is here. At ACE DuraFlo, our mission is to offer reliable and consistent environmentally friendly solutions for home and property owners worldwide.

The U.S. Green Building Council (USGBC) is the nation's leading organization to advance green building and is best known as the developer and administrator of the Leadership in Energy and Environmental Design (LEED) rating system. The organization's LEED® (Leadership in Energy and Environmental Design) Green Building Rating System™ encourages and accelerates global adoption of sustainable green building and development practices through the creation and implementation of universally understood and accepted tools and performance criteria.

"Joining the USGBC will allow us to maximize our effectiveness as a green building company," said Larry Gillanders, CEO of ACE DuraFlo Systems. "Our ePIPE product helps provide energy and water efficiencies into new and renovated construction projects. Environmental friendliness makes our final products better, more cost effective during the life cycle of the facility and more marketable for the customers we work with. We're excited about the new benefits we can provide to our clients as a result of our involvement with USGBC and LEED."

About ACE DuraFlo Systems, ePIPE

ACE DuraFlo Systems, LLC, provides pipe restoration products and services in the US, Canada and Europe. ACE DuraFlo's patented "in-place" pipe restoration technology restores failing copper and encrusted galvanized piping systems to multiple code requirements. ePIPE is installed in-place, without the extensive demolition that accompanies a traditional plumbing repipe. ePIPE extends the useful life of nonrenewable piping materials such as copper and steel. The result is a multi-code

compliant restored epoxy lined pipe called ePIPE[R]. ACE DuraFlo offers a complete solution for pinhole leaks and corrosion control for both commercial and residential plumbing systems. Information on ACE DuraFlo and ePIPE may be obtained by calling 888-775-0220 or by visiting [www.aceduraflo.com](http://www.aceduraflo.com).
